

CLARKE UNIVERSITY - CENTER FOR SCIENCE INQUIRY

This Center for Science Inquiry provides Clarke University's biology, chemistry, and physics departments with innovative lecture spaces and wet laboratories. The three-story facility is a technology-rich teaching space that fosters collaborative, hands-on learning. Lecture and laboratory spaces are organized in a flexible and efficient manner - providing multiple courses with an easy integration from classroom to laboratory during a single class period when desired.

Student-centered learning spaces, including student/faculty lounges, promote interaction. The building also offers undergraduate research laboratories, a small animal facility, a cadaver laboratory, faculty offices, and a stockroom.
